New Jersey Department of Health
COVID-19 Confirmed Case Summary

This chart shows the *percentage of all cases* who we know were hospitalized broken down by age group. For example, those in age groups less than 30 years old make up only a small percentage of all who have been hospitalized.

New Jersey Department of Health
COVID-19 Confirmed Case Summary

**Percentage of each age group who have been hospitalized
(N=4002)**

This chart shows the *percentage of cases within each age group* (for whom we have data) who have been hospitalized. For example, it shows that older adults are much more likely to be hospitalized. Note – due to small number of cases in some age groups (e.g., 0-4), even a few hospitalized cases will dramatically change their percentage in this chart. Thus, what appears to be a relatively high rate of hospitalization in the 0-4-year-old age group above is not likely indicative of severity in this population.
